

Atlantic Granite

Customer Measurement Form

Steps to Design:

- 1) Draw out a rough layout of the project you wish to accomplish
- 2) Label the location of the sink(s), cooktop, dishwasher, etc.
- 3) Label all walls present
- 4) Measure all necessary dimensions (length, width, depth, height)
 - *Wall to wall, end to end on all areas (countertop, island, etc.)
 - *Once measured, write down dimensions
 - *Standard cabinet depth is 24", we typically add 1.5" overhang
- 5) Circle all exposed corners
- 6) Mark all backsplash/side splash areas
 - *We use 3cm stone(s), so think of that when determining the height
- 7) Other measurements to consider: cabinets, sink(s), stove

<u>Calculating Countertop Square Footage</u>	<u>Calculating Backsplash Square Footage</u>	<u>Calculating Linear Footage</u>
Length(L) x Depth(D) = Area(A)	4" in height	Add all exposed edge lengths = E
Then	(Length + Length) 4 = Area	Then
A ÷ 144 = Sq ft	A ÷ 144 = Sq ft	E ÷ 12 = Lf
